                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             useful in the manufacture of a medicament for the treatment of a patient suffering from poisoning or a trisk of poisoning by clostridial toxin, e.g. from botulism or tetanus. The fragment, variant, fusion or derivative of a SNARE or of an inhibitory SNARE, or a recombinant polynucleotide encoding either of these SNARE polypeptides are useful in the manufacture of medicament for the treatment of a patient in need of inhibition of SNARE-dependent exceptosis from a cell capable of performing SNARE-dependent exceptosis. The method of treatment is relatively fast, thus alleviating the symptoms when most severe and taking the patient out of critical state.

Note: The present sequence is not shown in the specification but is derived from the mouse SNAP-25 sequence given in figure 8 (see AAU00246).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 to a cell of the patient, where the SNARE is resistant to proteolysis by the toxin (toxin-resistant SNARE) and/or is capable of inhibiting the toxin (toxin-inhibitory SNARE). The protein can be used in a method of treating a patient in need of inhibition of SNARE-dependent exocytosis from a cell capable of performing SNARE-dependent exocytosis, comprises supplying a fragment, variant, fusion or derivative of a SNARE or an inhibitory SNARE to the cell of the patient. The toxin resistant or toxin inhibitory SNARE or a recombinant polynucleotide encoding the SNARE is

The protein can be used in a method of treating a patient in need of inhibition of SNARE-dependent exocytosis from a cell capable of performing SNARE-dependent exocytosis, comprises supplying a fragment, variant, fusion or derivative of a SNARE or an inhibitory SNARE to the cell of the patient. The toxin resistant or toxin inhibitory SNARE or a recombinant polynucleotide encoding the SNARE is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          useful in the manufacture of a medicament for the treatment of a patient suffering from poisoning or at risk of poisoning by clostridial toxin, e.g. from botulism or tetanus. The fragment, variant, fusion or derivative of a SNARE or of an inhibitory SNARE, or a recombinant polynucleotide encoding either of these SNARE polypeptides are useful in the manufacture of medicament for the treatment of a patient in need of inhibition of SNARE-dependent exocytosis from a cell capable of performing SNARE-dependent exocytosis. The method of treatment is relatively fast, thus alleviating the symptoms when most severe and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               associated protein, SNAP25,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequence represents the amino acid sequence of synaptosomal

Example 1; Page - ; 131pp; English

method of treating a patient suffering from poisoning or at risk of CC poisoning by a clostridial toxin, comprising supplying a SNARE (soluble CC (N-ethylmaleimide-sensitive fusion protein)-attachment protein receptor) CC to a cell of the patient, where the SNARE is resistant to proteolysis by the toxin (toxin-resistant SNARE) and/or is capable of inhibiting the CC toxin (toxin-inhibitory SNARE). The protein can be used in a method of CC treating a patient in need of inhibition of SNARE-dependent exocytosis from a cell capable of performing SNARE-dependent exocytosis. CC supplying a fragment, variant, fusion or derivative of a SNARE or an CC inhibitory SNARE to the cell of the patient. The toxin resistant or toxin inhibitory SNARE or a recombinant polynucleotide encoding the SNARE is CC useful in the manufacture of a medicament for the treatment of a patient CC suffering from poisoning or at risk of poisoning by clostridial toxin, CC e.g. from botulism or tetanus. The fragment, variant, fusion or derivative of a SNARE or of an inhibitory SNARE, or a recombinant taking L.. polynucleotide encoding either of these SNARE polypeptides are useful in the manufacture of medicament for the treatment of a patient in need of inhibition of SNARE-dependent exocytosis from a cell capable of performing SNARE-dependent exocytosis. The method of treatment is associated protein, SNAP25, mutant R198A used in a The sequence represents the amino acid sequence of synaptosomal. the patient out of critical state fast, thus alleviating the symptoms when 'n specification new

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  treating a patient in need of inhibition of SNARE-dependent exocytosis of from a cell capable of performing SNARE-dependent exocytosis, comprises supplying a fragment, variant, fusion or derivative of a SNARE or an conhibitory SNARE to the cell of the patient. The toxin resistant or toxin controlled the snandacture of a medicament for the treatment of a patient cuseful in the manufacture of a medicament for the treatment of a patient cuseful in the manufacture of a medicament for the treatment of a patient cuseful in the monitoring or at risk of poisoning by clostridial toxin, considering from poisoning or at risk of poisoning by clostridial toxin, considering the solution or tetanus. The fragment, variant, fusion or considered the moutable of an inhibitory SNARE, or a recombinant considered encoding either of these SNARE polypeptides are useful in the manufacture of medicament for the treatment of a patient in need of conhibition of SNARE-dependent exocytosis from a cell capable of conforming SNARE-dependent exocytosis. The method of treatment is considered the patient out of critical state.

CC Note: The present sequence is not shown in the specification but is considered from the mouse SNAP-25 sequence given in figure 8 (see AAU00246).

CC associated protein, SNAP55, mutant R1987 used in a new
CC associated protein, SNAP55, mutant R1987 used in a new
CC method of treating a patient suffering from poisoning or at risk of
CC poisoning by a clostridial toxin, comprising supplying a SNARE (soluble
CC (N-ethylmaleimide-sensitive fusion protein)-attachment protein receptor)
CC to a cell of the patient, where the SNARE is resistant to proteolysis by
CC treating a patient sNARE) and/or is capable of inhibiting the
CC treating a patient, where the SNARE is resistant to proteolysis by
CC treating a patient, where the SNARE is capable of inhibiting the
CC treating a patient, where the SNARE is capable of inhibiting the
CC treating a fragment, variant, fusion or derivative of a SNARE or an
CC inhibitory SNARE or a recombinant polynucleotide encoding the SNARE is
CC useful in the manufacture of a medicament for the treatment of a patient
CC useful in the manufacture of a risk of poisoning by clostridial toxin,
CC e.g. from botulism or tetanus. The fragment, variant, fusion or
CC derivative of a SNARE or of an inhibitory SNARE polypetides are useful in
CC the manufacture of medicament for the treatment of a patient in need of
CC the manufacture of medicament for the treatment of apatient in need of
CC the manufacture of medicament for the treatment of apatient in need of
CC treatived from the supplement state.

CC relatively fast, thus alleviating the symptoms when most severe and
CC relatively fast, thus alleviating the symptoms when most severe and
CC user of the mouse SNAP-25 sequence given in figure 8 (see AAU00246).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   망
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ő
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  H
                                                                                                                                                                                                                                              The sequence represents the amino acid sequence of SNARE homologue, synaptosomal-associated membrane protein, hSNAP25b, used during analysis of SNAP-25. SNAP-25 mutants were used in a new method of treating a patient suffering from poisoning or at risk of poisoning by a clostridial toxin, comprising supplying a SNARE (soluble (N-ethylmaleimide-sensitive fusion protein)-attachment protein receptor) to a cell of the patient, where the SNARE is resistant to proteolysis by the toxin (toxin-resistant SNARE) and/or is capable of inhibiting the toxin (toxin-inhibitory SNARE). The protein can be used in a method of treating a patient in need of inhibition of SNARE-dependent exocytosis from a cell capable of performing SNARE-dependent exocytosis from a cell capable of performing SNARE-dependent exocytosis from a cell capable to the cell of the patient. The toxin resistant or toxin inhibitory SNARE to the cell of the patient. The toxin resistant or toxin inhibitory SNARE or a recombinant columns of the capable of a snake or an inhibitory SNARE or a recombinant columns.
                                                                                                         recombinant polynucleotide encoding the SNARE is useful in the manufacture of a medicament for the treatment of a patient suffering from poisoning or at risk of poisoning by clostridial toxin, e.g. from botulism or tetanus. The fragment, variant, fusion or derivative of a SNARE or of an inhibitory SNARE, or a recombinant polynucleotide encoding either of these SNARE polypeptides are useful in the manufacture of medicament for the treatment of a patient in need of inhibition of SNARE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           toxin-inhibitory SNARE; botulism; tetanus; SNARE-synaptosomal-associated protein; hSNAP25b; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Treating a patient suffering from poisoning or at risk of poisoning a clostridial toxin, e.g. botulism, comprises administering a toxin-resistant or toxin-inhibitory SNARE -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      18-AUG-2000;

The invention relates to a method for identifying a compound capable of affecting the binding of a syntaxin-binding protein (SBP), e.g. SNAP-25, alpha-SNAP, n-seci or VAMP, to syntaxin. The method comprises measuring the effect of the test compound on the extent of binding between the SBP and the SBP-binding site on syntaxin. The method can be used for identifying drugs capable of inhibiting or stimulating neurotransmitter release at the active zones of presynaptic membranes, which may be useful for treating CNS disorders affective or psychotic disorders, neurodegenerative diseases, hormonal or

cc associated protein, SNAP25. The sequence was used to create SNAP-25 double/single point mutants and C-terminal deletion cm trants used in a new method of treating a patient suffering from cc mutants used in a new method of treating a patient suffering from cc poisoning or at risk of poisoning by a clostridial toxin, comprising cc supplying a SNARE (soluble (N-ethylmaleimide-sensitive fusion protein) - cc attachment protein receptor) to a cell of the patient, where the SNARE is cresistant to proteolysis by the toxin (toxin-resistant SNARE) and/or is capable of inhibiting the toxin (toxin-inhibitory SNARE). The protein can be used in a method of treating a patient in need of inhibition of SNARE-cc dependent exocytosis from a cell capable of performing SNARE-dependent cexocytosis, comprises supplying a fragment, variant, fusion or derivative of a SNARE or an inhibitory SNARE to the cell of the patient. The toxin resistant or toxin inhibitory SNARE or a recombinant polynucleotide encoding the SNARE is useful in the manufacture of a medicament for the cell control of the snare for the cell of the patient, fusion or derivative of a SNARE or a trisk of poisoning content of a patient suffering from poisoning or at risk of poisoning contents. The strangment, fusion or derivative of a SNARE or of an inhibitory SNARE, or a snare content of a SNARE or of an inhibitory SNARE, or a SNARE or of an inhibitory SNARE, or a SNARE or of an inhibitory SNARE, or a snare content of a SNARE or of an inhibitory SNARE, or a snare content of a snare or of an inhibitory SNARE, or a snare content of a snare or of an inhibitory SNARE, or a snare or of an inhibitory SNARE, or a snare or of an inhibitory SNARE, or a snare or of an inhibitory SNARE.

                                                                                                                                                                                                                                                                                                                                                                              recombinant polynucleotide encoding either of these SNARE polypeptides are useful in the manufacture of medicament for the treatment of a patient in need of inhibition of SNARE-dependent exocytosis from a cell capable of performing SNARE-dependent exocytosis. The method of treatment is relatively fast, thus alleviating the symptoms when most severe and taking the patient out of critical state.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Treating a patient suffering from poisoning or at risk of poisoning a clostridial toxin, e.g. botulism, comprises administering a toxin-resistant or toxin-inhibitory SNARE -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mus

The agents of the invention inhibit secretion of neurotransmitter from neuronal cells can dis an excitation-secretory uncoupling peptide (I) of at least 20 cc amino acids (aa) all of which correspond substantially to any one of CC amino acids (aa) all of which correspond substantially to any one of CC amino acids (aa) all of which correspond substantially to any one of CC atecholamine secretion from bovine chromaffin cells at a concentration co of 10 microM, especially 0.25 microM, or less. (I) are used, as a CC replacement for clostridium toxin, to inhibit release of CC neurotransmitters from synaptic vesicles, specifically for reducing CC muscle spasticity. Also (I) may be labelled to allow in vivo imaging of intracellular distribution of (I). Compounds for delivering the drug to CC intracellular distribution of (I). Compounds for delivering the drug to CC intracellular for induction of apoptosis. Unlike the neurotoxins, (I) are not toxic or immunogenic and are more readily available. Their characterists for several days or weeks, so lower doses or less frequent treatments for several days or weeks, so lower doses or

                                                                                                                                                                            This represents a mouse SNAP-25 polypeptide, a component of the protein CC polypeptides thought to underlie vesicle docking and fusion. The CC invention provides rat and human Hrs-2 polypeptides which are ATP-CC preferring nucleotidase that associate with SNAP-25. For identifying a CC compound capable of modulating calcium-regulated secretion of secretory CC vesicles, a SNAP-25 polypeptide can be contacted with a Hrs-2 CC polypeptide, in the presence and absence of a test compound. The effect CC if the test compound on the extent of binding between the SNAP-25 and CC Hrs-2 polypeptides are measured and a compound is identified as effective CC if its measured effect on the extent of binding is above a threshold CC level. The products can be used for identifying drugs capable of CC affecting secretory processes, such as neurotransmitter release at the CC active zones of presynaptic membranes. Such drugs can be used for CC treating disorders or conditions of the central nervous system by CC selectively enhancing or inhibiting vesicular release in specific areas CC of the brain, including affective disorders (e.g. depression), disorders CC intervention in antigen processing, as such as anaesthesia. The drugs can CC system for treatment of hormonal imbalances, the immune system for CC intervention in antigen processing, secreted immunomodulators, and vital processing, as well as anti-tumour applications, such as regulation of CC membrane trafficking during rapid cell division.

The invention relates to an enzymatic assay for the quantitation of type A botulinum toxin, by determining the proteolytic activity of botulinum neurotoxin type A using fluorescamine detection. Botulinum toxin A has been shown to cleave the synaptosomal neurotransmitter peptide SNAP25 between residues 197-198. The method comprises adding an analogue (e.g. AAY44022-Y44076) of the SNAP25 peptide (AAY44021, amino acids 187-203 of human SNAP25) to a sample containing the botulinum toxin A so that hydrolysis of the peptide is initiated, then stopping hydrolysis of the peptide at different time points; and measuring the amount of hydrolysis at each time point by combining with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               botulinum neurotoxin type A using fluorescamine detection. The method comprises adding an analogue (e.g. AAY44022-Y44076) of this peptide (which represents amino acids 187-203 of the human synaptosomal protein SNAP25) to a sample containing the botulinum toxin A so that hydrolysis of the peptide is initiated, then stopping hydrolysis of the peptide at different time points; and measuring the amount of hydrolysis at each time point by combining with a label capable of detecting free amino groups resulting from the hydrolysis. The amount of botulinum toxin A present in the sample is determined by comparing measurements with the amount of label represents with a label capable of detecting from the hydrolysis.
                                                                                                                                                                                                                                                                                                                                                                                     06-NOV-1996;

                                                          useful in vaccination against botulism, for eliciting protective immunity in a mammal, for treating dystonias, spasticity, pain, ocular motility, facial dyskinesias, stiff-person syndrome, bladder dysfunction, segmental myoclonus, hyperkinetic disorders, cosmetic treatment of facial wrinkles, conditions characterised by hyperactivity of the lower motor neuron, and to control autonomic nerve function or tiproe-walking due to stiff
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Botulinum neurotoxin light chain; BoNT LC; botulism; dystonia; pain; spasticity; ocular motility; facial dyskinesia; stiff-person syndrome; bladder dysfunction; segmental myoclonus; hyperkinetic disorder; human; cosmetic treatment; facial wrinkle; cerebral palsy; analgesic; relaxant; lower motor neuron hyperactivity; autonomic nerve function; muscular; lower motor neuron hyperactivity; autonomic nerve function; muscular;
          muscles common in children with cerebral palsy. The seque useful for screening for botulinum neurotoxin inhibitors. represents a human polypeptide C-terminal fragment, used
                                                                                                                                                             The invention relates to a nucleic acid molecule encoding a botulinum neurotoxin light chain (BONT LC) serortype A, where the DNA has a sequence that is expressible in a host organism other than Clostridium, or has a total A+T content that is less than about 70% The BONT LC protein is
                                                                                                                                                                                                                                                                                             Novel nucleic acid molecule encoding botulinum neurotoxin light serotype A, useful for producing the neurotoxin for vaccination botulism, comprises sequence expressible in host other than Clos
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         hydrolysis. The amount of botulinum toxin A present in the sample is determined by comparing measurements with the amount of label produced from a known concentration of toxin measured under similar conditions. The method is useful for the quantitation of type A botulinum toxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              06-NOV-2000;
